13. Web Director Alignment Procedure
14. Preventive Maintenance and Lubrication
15. Troubleshooting

This unique factory school offers your maintenance personnel unlimited access to a machine. Attendees perform preventative maintenance procedures and troubleshooting techniques on an actual machine.

Fosber's Slitter/Scorer factory schools ensure that your maintenance department is trained to quickly troubleshoot the machine and efficiently perform preventative maintenance procedures. Our training techniques will minimize downtime and increase performance of the machine.

The school program is two days and is specifically designed to provide maintenance personnel with "hands on" training described in the school outline. Attendees need safety glasses, safety shoes, and work clothes to perform the procedures on the machine.

The school cost is \$1,500 per person, which includes all training materials and lunch each day. Transportation, hotel, or other expenses are not included in the package. To ensure a quality program space is limited. Multiple student discount can apply.

If you are interested in this school but the dates conflict with your schedule, please contact Fosber Training about future schools.
